DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 2-3 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 2-3, lines 3, 5, 8, 11 and 14 recite "a member". It is unclear what this limitation means. Please note that lacks antecedent basis. Applicant is suggested to rewrite the claim in the "means" plus function format.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over **Genov et al. (US 6,121,743)** in view of **Cheng et al. (US 2003/0171847)**.

As for claim 1, Genov discloses, an articulated robot comprising: a plurality of tools at a single unit thereof sharing portions of axes and capable of attaching the tools respectively tips of a plurality of axes connected to the axes independently therefrom (Figs. 35, 39, Col. 22, lines 29-54). However, Genov does not disclose a *control*

Art Unit: 2125

*apparatus for subjecting a designated one of the tools to an interpolate control while controlling a position thereof or controlling a position and an attitude thereof and subjecting the tool which is not designated to a uniform pay off control to instruct to an axis angle of a target position (Please note that the claim is written in the alternative only and therefore only one is required). But Cheng discloses a robot having a plurality of arms rotatable about a plurality of axes that define a plurality of angles wherein a tool is subjected to an interpolate control while controlling a position thereof ([0035]-[0037], Abstract). Therefore, it would have been obvious to a person of the ordinary skill in the art at the time the invention was made to combine the teachings of **Genov** with **Cheng** because it would provide an improved control system wherein the location component and orientation component of the Cartesian path are optimized, which improves path accuracy (Cheng, [0038]).*

Allowable Subject Matter

3. Claim 2 and therefore claim 3 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
